What is my location?

We opted to center the map on your current location when possible, using the html5 geolocation feature to find out the latitude and longitude of your location. When available, you can also get your **location address**.

Where am I? Your location coordinates are provided by your browser, and we can't access them without your consent. We do not keep any record of the location of our users, so feel free to allow the geolocation feature if you find it convenient. Visit this page to check my location (/my-location).

If you don't share your location, the map will just be centered on a default GPS location.
