14. Notes/Disclaimers

(a) Marble, Limestone and granite: Marble, Limestone and granite are natural stone materials containing veins with tonality differences. There will be color and markings caused by their complex mineral composition and incorporated impurities. While such materials can be pre-selected before installation, this non-uniformity in the marble, limestone or granite, as well as non-uniformity between pieces, cannot be totally avoided. Granite is pre-polished, and care has been taken for its installation. However, granite, being a much harder material than marble, cannot be re-polished after installation. Hence, some differences may be felt at joints. The tonality and pattern of marble, limestone or granite selected and installed shall be subject to availability.

(b) External Paints: The external plastered surface of the buildings is painted of suitable quality as decided by the Architects. Paints are manufactured products from chemicals and specific grades of minerals/natural stone products. After application, this paint is exposed to weather conditions. Ultraviolet rays and weather conditions will affect the life and sheen of the product, and also would cause damage to the expected/designed protective properties of paints. Therefore, periodic maintenance, including the redoing of paints would be inevitable.

(c) Materials, Fittings, Equipment, Finishes, Installation and Appliances: The brand, colour and model of all materials, fittings, equipment, finishes, installation and appliances supplied shall be provided subject to the architect's selection, market availability and the sole discretion of the Promoter.

(d) Timber: Timber is a natural material containing grain/vein and tonal differences. Thus, it is not possible to achieve total consistency of colour and grain in its selection and installation. Timber has an inherent property to react along with atmospheric changes, which results in bending, twisting and cracking and which is inevitable.

(e) Internet Access & Cable Television: If the Purchaser requires internet access & Cable Television, the Purchaser will have to make direct arrangements with the Service Provider /or such relevant entities/authorities for services to the Unit and to make all necessary payments.

(f) Glass: Glass, plain/clear/frosted, is widely used in residential developments and may break/ shatter due to accidental knocks or other causes. In addition, glass is a manufactured material, and the Purchaser may wish to note that it may not be 100% free from impurities. These impurities are not avoidable with quality checks and balances.

(g) Tiles: Tiles are manufactured from a special kind of clay and other materials. Baking at very high temperatures is an integral stage of the manufacturing process, and therefore, the shades and flatness of each lot vary a little bit. Hence, selected tile sizes and tile surface flatness cannot be perfect. We have been taking utmost care while receiving materials and while installing them to minimise these issues, but they can never be avoided completely due to inherent properties of the material, and therefore, excellence in flatness, sizes and minor chips on edges cannot be guaranteed.

(h) Design Experts: Professionally qualified practising consultants in the field are deployed to design different functions in compliance with applicable norms and guidelines. These functions are a) Architecture, b) Structure, c) Plumbing, d) Landscape, e) Fire Fighting and f) Power & Electrical. Design parameters set by such experts and the applicability of their drawings and decisions are treated as final.

(i) As per structural design principles, structures are allowed to deflect in different allowable loading/atmospheric/ground settlement/seismic parameters. Since masonry and RCC members behave differently in such situations, hair cracks in different components of the building are inevitable. These cracks are more visible in the plastered surface of the masonry work. While conventionally recognised precautionary measures will be undertaken diligently but complete disappearance of such cracks cannot be ascertained.

(j) Brick work, plaster and application of putty/POP over plastered surface are manual activities. As of this date, no machines have been found to execute these activities successfully without extensive human involvement. Hence, despite all quality processes in the job, undulation, out of plumb to a certain extent, cannot be avoided completely.

(k) That the arrangement for adequate water supply in the said project shall be done by deep/shallow bore well/s and also the required filtration as designed and recommended by the expert consultants on the basis of the then available data and parameters. However, water from bore well/s are a natural resource and inherently of ever evolving nature; no one can guarantee consistency, quantity, accuracy, quality and its contents in the future.
